On Sep 18, 2002 this sequence version replaced gi:21737464.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Reilly, B., Reilly, M., Ren, Y., Reuter, M., Richards, S., Riggs, F., Rives, C., Rodkey, T., Rojas, A., Rose, M., Rose, R., Ruiz, S.J., Sanders, M., Savery, G., Scherer, S., Scott, G., Shatsman, S., Shen, H., Shetty, J., Shvartsbeyn, A., Sisson, I., Sitter, C.D., Smajs, D., Sneed, A., Sodergren, E., Song, X.-Z., Sorelle, R., Sosa, J., Steimle, M., Strong, R., Sutton, A., Svatek, A., Trejos, Z., Usmani, K., Valas, R., Vera, V., Villasana, D., Waldron, L., Walker, B., Wang, J., Walse, R., Vera, V., Villasana, D., Waldron, L., Walker, B., Wang, J., Wang, G., Wallson, R., Warren, R., Wei, X., White, F., Williams, G., Willson, R., Wleczyk, R., Wooden, H., Worley, K., Wright, D., Wright, R., Wu, J., Zhou, X., Zhang, J., Zhou, J., Zhou, X., Zhang, J., Zhou, J., Zhou, X., Zhao, S., Dunn, D., von Niederhausern, A., Weiss, R., Smith, D.R., Holt, R.A., Smith, H.O., Weinstock, G. and Gibbs, R.A.

Submitted (12-OCT-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On Oct 12, 2002 this sequence version replaced gi:21747309.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Nwaokelemeh,O., Okwuonu,G., Olarnpunsagoon,A., Pal,S., Parks,K., Pasternak,S., Paul,H., Perez,A., Perez,L., Pfannkoch,C., Plopper,F., Poindexter,A., Popovic,D., Primus,B., Pul,-L., Puzzo,M., Quiroz,J., Rachlin,E., Reeves,K., Regier,M.A., Reigh,R., Reilly,B., Reilly,M., Ren,Y., Reuter,M., Richards,S., Riggs,F., Reilly,B., Reilly,M., Ren,Y., Reuter,M., Richards,S., Riggs,F., Rives,C., Rodkey,T., Rojas,A., Rose,M., Rose,R., Ruiz,S.J., Sanders,W., Savery,G., Scherer,S., Scott,G., Shatsman,S., Shen,H., Shetty,J., Shvartsbeyn,A., Sisson,I., Sitter,C.D., Smajs,D., Sned,A., Sodergren,B., Song,X.-Z., Sorelle,R., Sosa,J., Steimie,M., Strong,R., Sutton,A., Svatek,A., Tabor,P., Taylor,C., Steimie,M., Strong,R., Sutton,A., Svatek,A., Tabor,P., Taylor,C., Taylor,T., Thomas,N., Thomas,S., Tingey,A., Trejos,Z., Usmani,K., Valas,R., Vera,V., Villasana,D., Waldcon,L., Walker,B., Wang,J., Walton,R., Walker,B., Wang,Q., Wang,S., Warren,J., Warren,R., Wei,X., White,F., Wallison,R., Wilson,R., Weig,X., White,F., Willison,R., Wilcozyk,B., Wooden,H., Worley,K., Wright,D., Wright,D., Wright,D., Walker,B., Voon,V., Yu,F., Zhang,J., Zhou,X., Zhou,X., Zhao,S., Dunn,D., von Niederhausern,A., Weiss,R., Smith,D.R., Holt,R.A., Smith,H.O., Direct Submission

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Direct Submission
                                                                                                                                                                                               NOTE: Estimated insert size may differ from sequence length
[see http://www.hgsc.bcm.tmc.edu/docs/Genbank draft data.html].

NOTE: This is a "working draft" sequence. It currently
consists of 7 contigs. The true order of the pieces
is not known and their order in this sequence record is
                                                                                   arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will
                                                    be preserved.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >=30: an attempt was made to resolve all sequencing problems, such as compressions and repeats: all regions were covered by at least one plasmid subclone or more than one M13 subclone: and the assembly was confirmed by restriction digest. Within the assembly from 57011-57037 there are unresolved GC compressions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Wing,R.A., Frisch,D., Presting,G., Wood,T.C., Yu,Y., Soderlund,CKim,H., Rambo,T., Henry,D., Simmons,J., Thurmond,S.K. and Mao,L.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

Any regions longer than 1kb tagged as misc-feature 'unsure' are part of a tandem repeat of more than 10kb in length where it has not been possible to anchor the base differences between repeat copies. The region has been built up based on the repeat element to match the total size of repeat indicated by restriction digest, but tagged as misc-feature of the more digest.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em: RMBL Sw: SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at the WORMPEP database can be found at the WORMPEP database can be found at the WORMPEP database can be found at the WORMPEP database can be found at the WORMPEP database can be found at the MORMPEP clone-derived Caberafish pUC subclones occasionally display inconsistency over the length of mononucleotide A/T runs and conserved TA repeats. Where this is found the longest good quality representation will be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              but repeat copies may not be in the correct order and the usual finishing criteria may not apply.

The invention relates to to a cell-free protein synthesis system derived from wheatgerm where there is substantial exclusion of wheatgerm embryo albumen impurities. The novel system uses a sequence having a higher-order RNA structure that promotes translation activity. The higher-order sequence is preferably a "pseudoknot", especially derived from a range of

Cell-free protein synthesis means in wheatgerm system to establish overexpression of target gene with base sequence sustaining translation activity and function promotion, for producing useful proteins.

                              The invention comprises seven RNA sequences (CrPV-like viruses) which have a higher-order structure that sustains translational activity-promoting function. The RNA sequences of the invention are useful in the synthesis of proteins and polypeptides for application in developing and producing drugs. The RNA sequences of the invention are also useful in basic research of protein synthesis and structural analysis by the gene recombinant technique. The present nucleotide represents a Rhopalosiphum padi virus RNA sequence of the invention
                                                                                                                                                                                                                   Translational activity-promoting higher-order structure of CrPV-like viruses for protein translation when suitably initiated, useful in synthesis of proteins and polypeptides of foreign species for application

                                                                                                                                    paralysis virus). ALPV RNA is useful for controlling homopterous insects such as aphids or white files. It is useful in the research concerning aphids and for controlling aphids and in the field of agriculture or floriculture. It is also useful for detecting ALPV- viruses using PCR and for preparing a monoclonal antibody against antigen which is synthesised in vitro. The invention is also useful in gene therapy. The nrasent sequence is ALPV RNA

The methods and compositions of the present invention are useful for diagnosing and/or treating invasive Aspergillus fumigatus infection, including the allergic forms of the disease, such as Farmer's lung disease. They can also be used in various drug discovery purposes, such as expression of the recombinant protein, hybridization assay and construction of nucleic acid arrays. The present sequence represents an Aspergillus fumigatus essential gene open reading frame, used during diagnosis and drug development in the invention. These genes share a high degree of sequence conservation with known essential genes of candida albicans. The sequence data for this patent is not represented in the printed specification, but
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New purified or isolated Aspergillus fumigatus nucleic acid molecule encoding a gene product, useful for diagnosing and/or treating invasive fungal infections, such as Farmer's lung disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 2; SEQ ID NO 2418; 164pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (ELIT-)

                                                                                                                                                                                                                                                                                                                                                                                           Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               essential and are potential targets for drug screening. The methods and compositions of the present invention are useful for diagnosing and/or treating invasive Aspergillus fumigatus infection, including the allergic forms of the disease, such as Farmer's lung disease. They can also be used in various drug discovery purposes, such as expression of the recombinant protein, hybridization aspects, such as expression of nucleic acid arrays. The present sequence represents an Aspergillus fumigatus essential gene sequence containing all introns, used during diagnosis and drug development in the invention. These genes share a high degree of sequence conservation with known essential genes of candida albicans. The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format from WIPO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New purified or isolated Aspergillus fumigatus nucleic acid molecule encoding a gene product, useful for diagnosing and/or treating invasive fungal infections, such as Farmer's lung disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ADR85194 standard; DNA; 5442 BP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 5442 BP; 1392 A; 1331 C; 1397 G; 1322 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to Aspergillus fumigatus genes that are essential and are potential targets for drug screening. The methods a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to Aspergillus fumigatus genes that are essential and are potential targets for drug screening. The methods and compositions of the present invention are useful for diagnosing and/or treating invasive Aspergillus fumigatus infection, including the allergic forms of the disease, such as Farmer's lung disease. They can also be used in various drug diseovery purposes used as expression of the recombinant protein, hybridization assay and construction of nucleic acid arrays. The present sequence represents an Aspergillus fumigatus essential gene full length genomic sequence, used during diagnosis and drug development in the invention. These genes share a high degree of sequence conservation with known essential genes of candida albicans. The sequence data for this patent is not represented in the printed

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to a mutant lactic acid bacterium that overexpresses exopolysaccharides. The mutant bacterium has the pgm gene (alpha-phosphoglucomutase) at least partly inactivated, which results in increased production of exopolysaccharides. The mutant bacterium can be used to produce: (i) fermented food products; or (ii) exopolysaccharides, which are useful as food additives and in cosmetics and pharmaceuticals, e.g. as thickeners, gelling agents, texture stabilisers and fat substitutes. The present sequence is the pgm gene from Streptococcus thermophilus, which was used in an example from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Anba J, Ha

                                                                                                                                                                                                                                                                                                        १
                                                                       밁
                                                                                                                                                 밁
                                                                                                                                                                               ঠ
                                                                                                                                                                                                                                                                                                                                                      CC sequences. (I) is useful as hybridisation probes, polymerase chain Creaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used CC in diagnostics as expressed sequence tags for identifying expressed CC genes. (I) is useful in gene therapy techniques to restore normal CC extivity of (II) or to treat disease states involving (II). (II) is CC useful for generating antibodies against it, detecting or quantitating a CC polypeptide in tissue, as molecular weight markers and as a food CC supplement. (II) and its binding partners are useful in medical imaging CC involving aberrant protein expression or biological activity. The CC involving aberrant protein expression or biological activity. The CC disgnostics, gene mapping, identification of mutations CC disgnostics, gene mapping, identification of mutations CC and to produce other types of data and products dependent on DNA and CC amino acid sequences. AAS44197-AAS94564 represent novel human diagnostic CC coding sequences of the invention. Note: The sequence data for this CC patent did not appear in the printed specification, but was obtained in CC fraction format directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to to a cell-free protein synthesis system derived from wheatgerm where there is substantial exclusion of wheatgerm embryo albumen impurities. The novel system uses a sequence having a higher-order RNA structure that promotes translation activity. The higher-order sequence is preferably a "pseudoknot", especially derived from a range of viruses (ABZ80707-ABZ80713). This sequence represents the "pseudoknot" higher-order sequence from the Drosophila C virus. The sequence is used in a construct which may also include an intergenic region and internal ribosome entry site (IGR-IRES). The method is applicable in producing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Cell-free protein synthesis means in wheatgerm system to establish overexpression of target gene with base sequence sustaining translactivity and function promotion, for producing useful proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (NAAG-)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention comprises seven RNA sequences (CrPV-like viruses) which have a higher-order structure that sustains translational activity-promoting function. The RNA sequences of the invention are useful in the synthesis of proteins and polypeptides for application in developing and producing drugs. The RNA sequences of the invention are also useful in basic research of protein synthesis and structural analysis by the gene recombinant technique. The present nucleotide represents a Drosophila C virus RNA sequence of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Translational activity-promoting higher-order structure of CrPV-like viruses for protein translation when suitably initiated, useful in springers of proteins and polypeptides of foreign species for application
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI; 2002-627482/67

CC the 6213 antisense sequences given in the specification where expression could be acted inhibits proliferation of a cell. Also included are:

((1) a vector comprising a promoter operably linked to the nucleic acid cencoding a polypeptide whose expression is inhibited by the antisense could concleic acid; (4) a host cell containing the vector; (3) an isolated controlled acid; (4) an antibody capable of specifically binding the polypeptide or its fragment whose expression is inhibited by the cantisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway in which a proliferation, or that inhibits cellular proliferation of an compound which the test compound that inhibits proliferation of an compound acts; (9) manufacturing an antibiotic; (10) profiling a compound source of the strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the collection of collection of an organism. The antisense nucleic acids are useful for identifying proliferation to isolate candidate molecules for rational cross of collection of collection of an organism. The antisense nucleic acids are useful for required for proliferation in cells other than S. aureus, S. typhimurium, the properation of the target for this narent did antisense organism for the acrusing the terrains for this narent did antisense organism for the carget of a compound that inhibits the confidence of a compound that inhibits the confidence of the carget of a compound that inhibits the confidence of the carget of a compound that inhibits the confidence of the carget of a confidence of the carget of a confidence of the carget of a confidence of the carget of a confidenc

New Acinetobacter baumanii proteins and nucleic acids, useful as reagents for diagnosing a bacterial disease, as components of antibacterial vaccines, as targets for antibacterial drugs, or as biocontrol agents for

Example; SEQ ID NO 1708; 328pp; English

The A. baumannii nucleic acids and polypeptides are useful as reagents for diagnosing a bacterial disease, as components of antibacterial vaccines, as targets for antibacterial drugs, to detect the presence of A. baumannii and other Acinetobacter species in a sample, in screening compounds for the ability to interfere with the A. baumannii life cycle or to inhibit A. baumannii infection, and as biocontrol agents for plants. The present sequence represents DNA encoding an A. baumannii invention relates to isolated Acinetobacter baumannii nucleic acids

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL3051), expressed DNA sequences (ABL0175) and the encoded proteins (ABB57737-babB72072). The sequence data for this patent did not form part of the

XX WPI Cricket paralysis virus derived pseudoknot sequence. 15-OCT-2003 ABZ80710; ABZ80710 standard; RNA; 188 BP (first entry)

Pseudoknot; secondary structure; cell-free albumen; impurity; higher-order structure; internal ribosome entry site; ss. protein synthesis; intergenic region;

Cricket paralysis virus.

WO2003033719-A1

08-OCT-2002; 2002WO-JP010447

17-OCT-2001; 2001JP-00319923

NAT INST AGROBIOLOGICAL WAKENYAKU KK. SCI

Nakashima N, Shibuya N, Nishikawa

WPI; 2003-403230/38

Cell-free protein synthesis means in wheatgerm system to establish overexpression of target gene with base sequence sustaining translation

The novel system uses a sequence having a higher-order RNA structure that promotes translation activity. The higher-order sequence is preferably a "pseudoknot", especially derived from a range of viruses (ABZ80707-ABZ80713). This sequence represents the "pseudoknot" higher-order sequence from the Cricket paralysis virus. The sequence is used in a construct which may also include an intergenic region and internal ribosome entry site (IGR-IRES). The method is applicable in
           have a higher-order structure that sustains translational activity-promoting function. The RNA sequences of the invention are useful in the synthesis of proteins and polypeptides for application in developing and producing drugs. The RNA sequences of the invention are also useful in basic research of protein synthesis and structural analysis by the gene recombinant technique. The present nucleotide represents a Cricket paralysis virus RNA sequence of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CrPV-like virus; 88; higher-order structure; drug drug production; translational activity-promoting protein synthesis; structural analysis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 188 BP;
